

The Town of Yarmouth recently completed the Bass Creek salt marsh restoration project which will rejuvenate 35 acres of wetlands in the Callery-Darling Conservation Area. The Gulf of Maine Council grant was matched by aerial survey services from **Eastern Topographic**, and cash donations to CWRP from **Spectra Energy**, and **Procter & Gamble/Gillette**. Walkers can access the trail map at: www.yarmouth.ma.us (follow link to Conservation).

FYI-The CWRP has participated on restoration projects which have restored 278 acres of wetlands, and 30.5 miles of river habitat.

At right: Neponset River Watershed Association intern and DCR forester release two species of *Galerucella* beetles used as a biological control mechanism to reduce invasive purple loosestrife populations on state land. CWRP contributions from **ERM New England**, **Procter & Gamble**, and **Normandeau Associates**, were doubled by the Partnerships Matching Funds program of the Department of Conservation and Recreation. (More photos by Carly Rocklen can be seen at <http://www.neponset.org/WetlandRestor-PLBiocontrol-pics.htm>)

Support from CWRP will provide materials for volunteers to propagate beetles on potted loosestrife plants, and supplies for monitoring vegetative changes in sample plots.
